Note 1: Total Accuracy = (A/D Accuracy / Span + D/A Accuracy) or (± 0.1% of calibrated span), whichever is greater.
Accuracy of Fieldbus type: A/D Accuracy.
For T/C input, add Cold Junction Compensation Error (± 0.5°C) to the total accuracy.
Example: when selecting Pt100 with measurement range of 0 to 400 °C
0.14°C / 400°C×100% of span +0.03% of span = 0.065% of span
Since the value is smaller than ±0.1% of span, the total accuracy is ±0.1%.

Note 2: T/C C type is same as W5 (ASTM E988).

Table 2. Temperature coefficient

Sensor Type		Temperature Coefficient
Thermocouples E, J, K, N, T, L, U		0.08°C + 0.02% of abs.reading
Thermocouples R, S, W3, C		0.25°C + 0.02% of abs.reading
Thermocouple B	100°C ≤ Reading < 300°C	1°C + 0.02% of abs.reading
	300°C ≤ Reading	0.5°C + 0.02% of abs.reading
RTD		0.08°C + 0.02% of abs.reading
mV		0.002 mV + 0.02% of abs.reading
ohm		0.1 Ω + 0.02% of reading

Note1: The “abs.reading” for thermocouples and RTD means the absolute value of the reading in °C.
Example of “abs.reading”
When the temperature value is 250 Kelvin, “abs.reading” is 23.15.
|250−273.15|= 23.15

Note2: Ambient Temperature Effect per 10 °C change is ±0.1% or ±(temperature coefficient/span), whichever is greater.
Example of Ambient Temperature Effect
Conditions:
1) Input Sensor: Pt100
2) Calibration Range: −100 to 100°C
3) Reading value: −50°C
Ambient Temperature Effect per 10°C
Temperature Coefficient/Span=(0.08°C+0.02/100×|−50°C|)/{100°C−(−100°C)}= 0.00045 → 0.045%
Therefore, Ambient Temperature Effect is ±0.1%/10°C

< Ordering Information >

Specify the following when ordering Model, suffix codes, and optional codes.

Input order information according to Table 3-1 and 4-1. The instrument is shipped with the setting shown in Table 3 and 4 based on order information. Table 5 shows usable characters.

4-20mA type (HART type)

1. Sensor type.
   For RTD wires and resistance input, specify the number of wire as well. (Example: Pt100 3-wire system)
   For sensor input code-2, specify the type for two inputs. In this case, PV (Sensor1 value) and SV (Sensor2 value) are alternately displayed on the integral indicator with sensor back up DISABLE.
2. Calibration range and unit
   1) Calibration range can be specified within the measurement range shown in Table 1. Also, set the upper limit is larger than the lower limit.
   2) Specify one range from °C, K, °F or °R for temperature input. Specify the unit of mV for DC voltage input, or Ω for resistance.
3. Tag Number (if required)
   Specify Tag number (up to 16 Characters) to be engraved on the tag plate. The specified letters are converted to uppercase and written on Tag (16 Characters) in the amplifier memory.
4. Software tag
   Specified characters (up to 32 characters) are set as “Tag” (the first 8 characters) and “Long tag (32 characters) in the amplifier memory. When the “SOFTWARE TAG” is not specified, “TAG NO” is set as “Tag” (the first 8 characters) and “Long tag” (32 characters) in the amplifier memory.
5. Other factory configurations
   Specifying option code CA will allow further configuration at factory.
   Specified characters are converted to uppercase and written on descriptor in the amplifier memory.
6. Sensor back up
   Select ‘DISABLE’ or ‘ENABLE’.

Fieldbus type

1. Sensor type.
   For RTD wires and resistance input, specify the number of wire as well. For sensor input code-2, specify the type for two inputs. (Example: Pt100 3-wire system)
   In this case, AI1 (Sensor1) value and AI2 (Sensor2) value are alternately displayed on the integral indicator with sensor back up DISABLE.
2. Calibration range (XD_SCALE)
   For sensor input code-2, specify the range for two inputs.
3. Units of calibration range:
   Specify only one unit from the table, ‘Settings when shipped.’ For sensor input code-2, specify the unit for two inputs.
4. Output mode (L_TYPE)
   Select ‘Direct’ or ‘Indirect .’
5. Output scale (OUT_SCALE)
   For sensor input code-2, specify the scale for two inputs.
6. Output scale unit
   Specify only one unit from the table, ‘Settings when shipped.’ For sensor input code-2, specify the unit for two inputs.
7. Tag Number
   Specify Tag number (up to 16 Characters) to be engraved on the tag plate.
8. Software Tag (PD_TAG)
   Specify software tag (up to 32 Characters) to be written on the amplifier memory.
9. Node Address
   "Specify in hexadecimal"
10. Operation Functional Class
    Select ‘BASIC’ or ‘LINK MASTER’.
11. Sensor back up
    Select ‘DISABLE’ or ‘ENABLE’.
